We will cover with the following concepts

1) Responsive Layout using flexbox

Sometimes we need to change the way elements move across different screen sizes

- Changing individual elements across all viewport sizes is inefficient for a complex web page.

- Vertical Centering is easy with flexbox.

- It is supported by all major browsers

Flexbox has control at two levels

- We have properties at the flexbox levels which control the behaviour of all items in a flexbox in general

- We have properties at the item level through which you can control behavior of a particular item

- Let's look at our FlexBox cheat sheet to see the behaviour of these properties with examples

Next Steps -
